

## Lagun Table Install 2019 Unity TB

We love our 2019 Unity Twin Bed, but we found the stock table to be inconvenient to use. It's heavy and difficult to remove from the storage location, and when it's installed, it makes the living area feel too cramped.

Looking for solutions we found folks on the forums that have used a Lagun table bracket system to replace the stock table and center pole.

We decided to order 2 table supports; one for each side chair. I recommend that if ordering 2 sets for opposing chairs, call the factory and get one with the base handle reversed. They will make you a left handed version.

They come fairly well protected however ours did arrive with a couple scratches. We were not bothered by that enough to return them.

Here are all the components with the exception of the mounting plate and the reinforcement block of wood.

## Lagun Table Install 2019 Unity TB

We ordered our legs from Lagun USA for \$189 each. <https://www.lagunusa.com>  
(319) 243-910

We have heard that they are slightly cheaper at the Lagun UK site, so if you shop around you might find them cheaper. But we wanted to be sure to get a left hand handle on one of ours since they are on opposing sides of the rig and ordering from the US Factory was the easiest way to assure that.

## Lagun Table Install 2019 Unity TB

Friends who had completed a similar installation had found that the seat boxes needed additional bracing to support the weight and stress the Lagun table. (Thanks Nick and Jan for the words of wisdom)

We purchased some additional brackets to reinforce the seat frames.

To reinforce the seat frames corner brackets were installed and a corner/ floor bracket added just for more support. I notched the supplied wood backer plate to make room for the factory installed corner support.

We chose to disregard the holes in provided support board and drill our own to install the mounting plate where we wanted. We put it close to the front of the seat box and almost flush with the top.

This image is of the driver side plate installation. You'll notice it is as high on the frame as possible and inset from the front the width of the front panel.

Be very careful to get this plate mounted level and plumb as it will throw off the level of your table if it isn't. Use a clamp to hold it in place to check level before drilling.

---

And then look at what I found in the passenger seat area behind the CO2 alarm.....a fuse. I did not know it was there. Looks like to replace the fuse, the CO2 alarm can be pulled off to gain access.

OK, on to the install

## Lagun Table Install 2019 Unity TB

For the table tops we chose to start with some \$10 folding TV tables from Walmart. We removed the legs and then made a template from cardboard.

Here we are using our CAD (Cardboard Aided Design) system to determine where the placement of the table top on the mounting plate would work best for us.

## Lagun Table Install 2019 Unity TB

We found that the table mounting plate worked best to be in the corner of the tops about 1 inch from the edge. We used the opposite corner for the opposing table.

## Lagun Table Install 2019 Unity TB

Here is the completed project with several different placements of the tables. We love how they can stow out of the way either over the opposing seats or the front seats when they are swiveled.
